2B Extra Matt Lac Gloss 5% #11098

Introduction

Top Quality Varied Designs

Etaparket floors are engineered for long wear resistance and are designed to withstand Scandinavian climate conditions with dry air in winter and high moisture air in rain season. This allows Etaparket to fit various climate conditions around the globe.

Etaparket is sold in Europe, Asia, America, Australia and Africa. Continuous innovation of our products and implementation of new technologies has made our floors truly unique.

1 Strip Oak Grading

1 Strip Oak City

Little or no color variation. Sapwood not allowed, healthy knots diameter < 10 mm, no repaired knots

1 Strip Oak Elite

Moderate or little color variation allowed. Minimal sapwood presence, healthy knots diameter < 10 mm, knot repairs with filler < 7 mm

1 Strip Oak Town

Moderate color variation allowed. Occasional sapwood < 30 mm width, healthy knots diameter < 30 mm, knot repairs with filler < 20 mm

1 Strip Oak Grading

1 Strip Oak Nordic

Moderate color variation with sapwood present, healthy knots diameter < 10 mm, knot repairs with filler < 7 mm

1 Strip Oak Village

Higher color variation allowed. Occasional sapwood < 30 mm width, healthy knots and fallen out repaired knots diameter < 35 mm, filled crack < 50 mm

1 Strip Oak Ranch

Higher color variation allowed. Occasional sapwood < 50 mm width, unlimited healthy knots and fallen out repaired knots diameter < 60 mm, filled crack < 150 mm

1 & 3 Strip Oak Grading

1 Strip Oak Nova

Moderate color variation. Sapwood not allowed, healthy knots diameter < 10 mm, no repaired knots.

1 Strip Oak Vivid

High color variation. Sapwood allowed up to 1/3 of the width. Occasional sapwood < 30 mm width, healthy knots diameter < 30 mm, knot repairs with filler < 20 mm

3 Strip Oak Town

Moderate color variation. Sapwood not allowed, healthy knots diameter < 10 mm, repaired knots diameter < 10 mm

3 Strip Oak Grading

3 Strip Oak Nordic

Moderate color variation with sapwood present, healthy knots diameter < 10 mm, repaired knots diameter < 10 mm

3 Strip Oak Village

Natural color variation with sapwood allowance < 15 mm on lamella sides, healthy and repaired knots diameter < 17 mm

3 Strip Oak Vintage Light Brush

High color variation and sapwood allowed, healthy and repaired knots diameter < 23 mm

1 & 3 Strip Ash Grading

1 Strip Ash Elegant

Natural color variation with brownheart present, contrast of light and dark colors. Occasional knots diameter < 25 mm

1 Strip Ash Elite

Light natural color variation with no brownheart allowed, no dark and light contrast

3 Strip Ash Elegant

Natural color variation with brownheart present, contrast of light and dark colors. Occasional knots diameter < 10 mm

3 Strip Ash Elite

Very light natural color variation, no brownheart allowed

Chevron

The Structure Drawing & Explanation

General Info

All wood materials used in the production of ESTA Parket are dried /conditioned within our factory complex, and this guarantees stability of the boards construction.

Flooring boards are glued at low temperatures, there is no inner tension like in solid wood within the components making up the finished product, and therefore they perform better as a laid floor.

The bottom layer is a Birch veneer, that adds to the board stability.

The resins used in production are non-toxic, and the parquet complies with the severest health requirements.

ESTA Parket is recommended to be used over underfloor heating. Our parquet performs well even under Scandinavian variations of moisture and temperature.

Warranty

Estaparket offers limited warranty 30 years. Please see our warranty terms and conditions on our website.

Innovation

Today's trend is for natural surface that usually can be achieved only with oiled surface that requires a lot more maintenance, than lacquered surface. Lacquered surface is easy to clean and maintain but looks less natural. Estaparket offers innovative lacquering coating system that looks as natural as oiled surface and requires as little maintenance as traditional lacquered surface. The gloss level is only 5%.

Fixed length boards

The boards always come in full length to show the luxury and beauty of the floors. We believe the proportion is vital for high-end flooring and short boards can ruin the look.

Fixed Length Boards; Estaparket

Random Length; Other Factory

Birch plywood insert for short end lock system

We use the strongest available material for short ends: birch plywood. The tension on the locks on short side of the boards can be extremely high, especially in dry climate periods. Softwood or artificial materials like HDF are often not able to withstand the tension which leads to open gaps between boards.

Filler stained to color of design

Filler repair at Estaparket factory is done only by hand, as it is the only way to achieve best quality. The advantage of our filler is that it can be stained and is ECO friendly. This allows to have calm and natural look for floors also with bigger knots.

Climate

Correct climate will keep you healthy and your floors beautiful

Ideal climate for parquet boards is same as for people: Relative Humidity 40–60% and temperature 14°C–23°C. Our parquet is made from real wood, natural living materials. Wood is adjusting according to climate (shrinking or expanding). Dry air (below 30% of Relative Humidity) is hazard not only for wooden floors, but also to humans, leading to asthma and other respiratory ailments. Too humid air will make your floors expand and make you feel fatigue and dehydrate.

Unique Estaparket underlayment allows your wooden floors to breathe

Avoid mould growing under your floor by letting your floors breathe. Unique Estaparket 2.3 mm thick underlayment uses air channels to circulate air under the floor using micro pumping system. Air channels in underlayment ensure a constant exchange of air when walked on. This eliminates water vapor from the floor. This underlayment also reduces sound by 22 dB and has a high level of compression strength. It also works well with underfloor heating.

<p>AIR CIRCULATION</p> <p>Number of air channels per 1 m > 175</p>	<p>HUMIDITY PROTECTION</p> <p>> 100 m water permeability value (SD) comparable</p>	<p>NOISE INSULATION</p> <p>22% reflected sound reduction + impact sound improvement</p>	<p>COMPRESSION STRENGTH</p> <p>Density of foamed layer 35 kg/m³</p>	<p>THERMAL RESISTANCE</p> <p>0.04 m² K/W Thermal Resistance R</p>
--	--	--	---	---

Click system by UNILIN

The construction of Estaparket lock system is designed to minimize gaps between boards. There are no plastic inserts, making sure all parts of lock system expand or shrink together following the whole construction. Estaparket guarantees lowest height tolerances between boards.

T&G lock system

100% from wood

Etaparket floors are fully recyclable. They are produced from renewable resources without damaging our nature. The wood sourced from controlled forests means that after every tree that was cut, there is new one planted.

We use our raw materials efficiently, almost without any waste. Offcuts are used for packaging and recycled into green energy. External audits and reviews of our environmental management systems are carried out on a regular basis.

Unique slow wood drying process

We produce the parquet boards only in the factory in Estonia, starting from drying the wood to ensure superb quality. We dry wood ourselves, using only the green energy. Compared to 2 weeks drying process, which is standard in the industry, we dry wood for about 45 days. Slow drying makes considerably less stress to the wood, making floors more stable.

M1 certified, no added VOC/Formaldehyde

Flooring industry standards and norms have not been updated for decades and are considerably less strict than M1. Formaldehyde emissions and VOC can be very dangerous and lead to various diseases. M1 certification guarantees that emissions from Estaparket are as slow, as they are found in the trees in Nature, making Estaparket floor perfectly safe for your home.

Floor Heating

Etaparket floors are suitable for underfloor heating. The heating system should be adjusted so that the parquet temperature never exceeds +27°C. The maximum variation in temperature should not be more than 5°C within 24 hours.

Cleaning and Maintenance

Etaparket floors are designed for easy cleaning and maintenance. Simply vacuum clean them regularly and mop up all spills promptly.

Daily cleaning: use vacuum cleaner.

Advanced cleaning (recommended 1-2 times a month): vacuum clean and then sweep them with a slightly humid mop and using universal floor cleaners or very small amount of warm soapy water. You should only sweep floors after you have cleaned them with vacuum cleaner, as otherwise you will sweep dust into the wooden pores.

General Care and Damage Prevention

Please monitor moisture and temperature as set out below and take corrective measures, if necessary. Place doormats on both sides of your front door. Remove any dirt or other abrasives and wipe up liquid spills immediately. If you spill (food or drinks), wipe up with cloth or paper towels to prevent any permanent damage or staining. Protect all furniture with felt pads to avoid any scratching with movement. Avoid wearing high-heeled shoes on the floor, as they can dent or scratch the floor. Close curtains or blinds to limit direct sun exposure. Keep pet's nails trimmed to minimize damage to the surface.

About ESTA

ESTA Parquet is the Brand name for the parquet manufactured by Technomar & Adrem AS, a family owned private Company founded in 1991. From the beginning the main activity of the Company was further processing of plywood and timber. At least 95% of our products are produced for Customers in more than 72 countries throughout Europe, America and Asia.

Making use of the latest technological advancements enabled the Company to manufacture a high quality product from the very beginning.

The results of the tests made by independent laboratories show that the quality of ESTA Parquet, is on same or higher level compared to other premium parquet manufacturer, particularly in the quality of the finished surface.

The factory is capable of producing up to 2.5 million square meters of parquet per year.

In 2005 a new factory was built on the main Tallinn site and fitted out with the latest technically advanced machinery supplied by specialists in this field: Germany – Bürkle, Homag, Schröder, Sweden – Wood-Eye, Finland – Martek, Italy – Cefla/Sorbini, Costa.

- ✔ ESTA Parquet is produced by a workforce who exercise great care and are justly proud of their Product.
- ✔ Laid Esta Parquet floor will provide pleasure and enjoyment for many years to come.
